

APEX ITALY SRL

Apex Italy, Italian branch of Apex Group of Companies, will be present in Converflex at **stand No. XXXX**.

Special attention will be drawn to the „**Genetic Transfer Technology**“, the revolutionary development for manufacturing **UniCorr®**, **UniFlex®** and **UniCoat®** metering rolls. The new technology effects the transfer of ink in a superior way to any traditional roll, due to a revolutionary roll surface and to the new type of engraving. The results are remarkable, one roll will cover the print options of a number of different traditional anilox screens and a smoother, denser lay of inks on solid areas is a consequence, because of less air. Also the cleaning characteristics have improved greatly. Trials are constantly done with machine manufacturers and end users in all segments (Corrugated, Flexible Packaging, Offset/Coating) to further improve the product and its applications.

Apex introduces the new standard for anilox rolls in the narrow web industry, named **UniFli®** (Uni-Fast Light Innovative). This special lightweight anilox roll has a body construction of anodized aluminium, as durable and accurate as steel. An efficient stock programme makes fast delivery times realizable with an attractive transparent price level. Apex Group of Companies is a globally operating group with 4 production facilities at several continents, 5 sales offices spread around the world and represented in more than 50 countries worldwide.
