

BACCIOTTINIGROUP SRL

THE SPECIALIST

Bacciottini group leader in the scoring world will be present at Grafitalia 2009.

Our company after the big success at Drupa will show for first time in Italy the new line of PIT STOP FM AND PIT STOP DH. Both machine are simple to use, The new machine FM is equipped with a double drive system; this ensures accurate creasing and feeding at high speed. Each of these drives is powered independently driven from stepper motors. The DH has double head that allows for an even wider variety of substrates to be produced in the same pass. This is achieved as the creasing can be produced from the top or bottom of a product as it passes through the machine, we can also crease and perforate in the same pass at high speed. Both machine could have the punching perforation as round and square holes. There will be also important news and as usual we do not disappoint one's hopes.
